psammitic सिकतादिमक	arenaceous सिकतामय	granulyte सिकताश्म
pelitic मृदादिमक	argillaceous मृण्मय	pulveryte मृदाश्म

The Gk terms psephitic, psammitic, and pelitic are now used as descriptive adjectives for metamorphic rocks derived respectively from gravel rocks, sand rocks, and clay rocks The corresponding Lat terms rudaceous, arenaceous, and argillaceous, are more familiar and connote more directly than the Gk terms the characteristic features of the sedimentary rocks themselves When the sedimentary rocks have been hardened and altered beyond limits implied by the Latin terms, the less familiar Gk words are more applicable—Tyrrell p 270 n 2 Grabau has proposed the terms *spheryte*, *granulyte*, and *pulveryte* for chemical (and organic) rocks, the grain of which corresponds with that of rudaceous, arenaceous and argillaceous rocks respectively—Tyrrell p 217)
